

Do you know the signs of **SEPSIS** in children?

Children's Health Queensland and the Queensland Paediatric Sepsis project, have created the Sepsis in children website to support clinicians caring for children across the state.

Designed to improve awareness, early recognition and management of sepsis, it includes:

- ✓ Clinical guidelines, tools and other resources for health professionals
- ✓ Online education and courses
- ✓ Information for families
- ✓ Family stories

Sepsis is a leading cause of preventable death and disability in children. While it can affect anyone, young children are at greater risk.

Your role is key in the early detection and management of children with sepsis or septic shock. Visit www.childrens.health.qld.gov.au/Sepsis
