

# ieMR Advanced will deliver...

ieMR Advanced

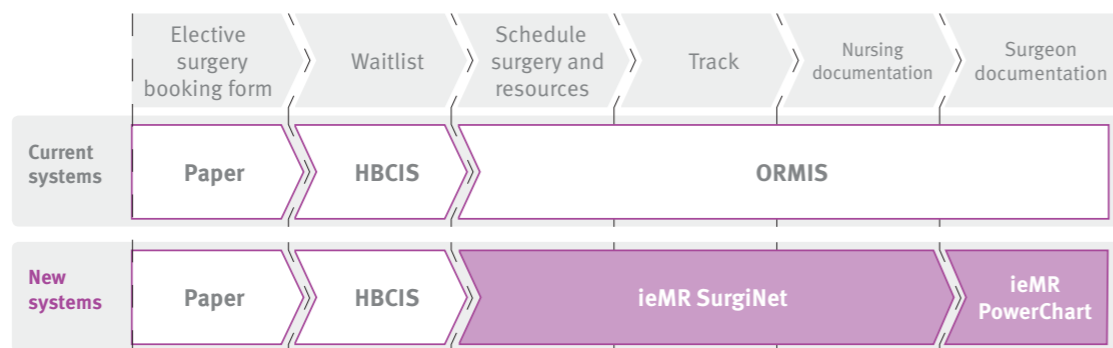

## CD Care delivery

- Workflow organisers (e.g. task lists)
- Early warning tool
- Consolidates bedside charting, clinical forms and data
- Clinical documentation integrated within medical record

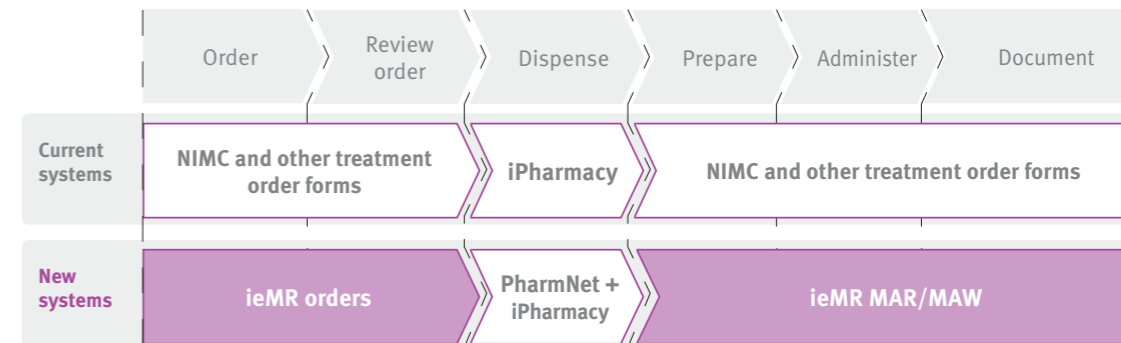

## SN Surgical scheduling and perioperative documentation

- Enables nursing documentation for all areas of surgery (pre-op, intra-op, post-op)
- Surgery case tracking, surgical scheduling and material management
- Provides scheduling visibility across CHQ/other sites
- Surgical documentation integrated within medical record

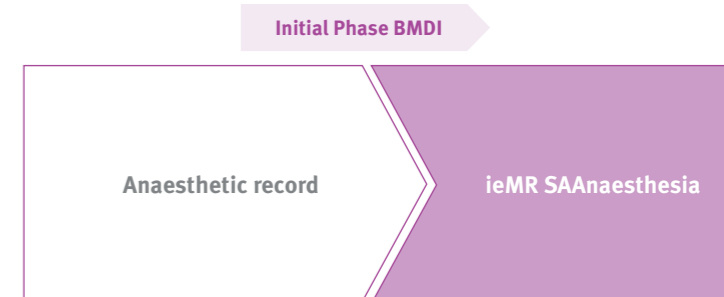

## MM Medications management and other treatment orders

- Medication order entry including complex medication management, discharge and ambulatory prescriptions
- Active and passive clinical decision support (e.g. order sentences, drug-drug interactions)
- Electronic medications administration
- Medication reconciliation (home, admit, transfer, discharge)
- Tighter controls will facilitate safer ordering and administering
- NIMC and other treatment orders integrated within medical record
- Some medication information will continue to be maintained outside of ieMR (e.g. CHARM)

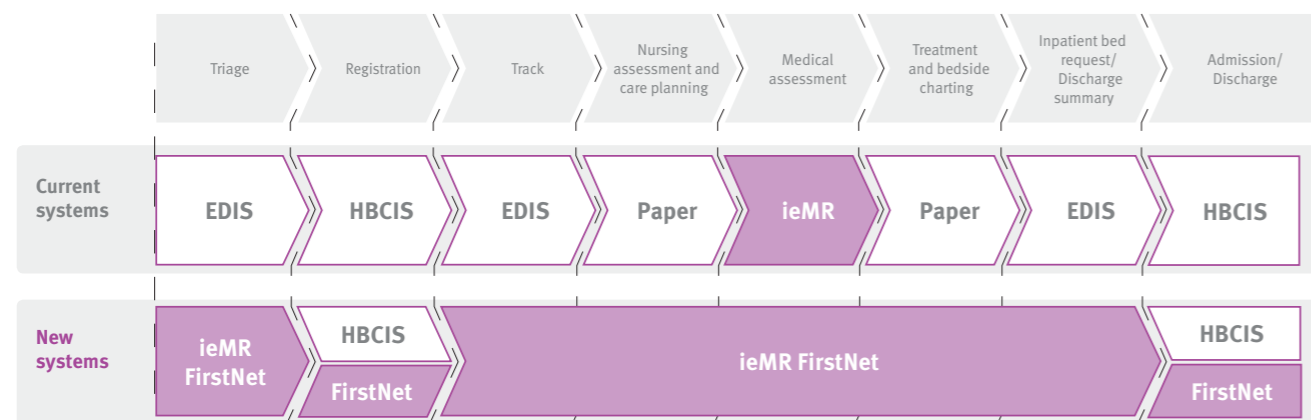

## SAA Anaesthetic record keeping

- Electronic medication order and administration
- Anaesthetic case documentation
- Device integration for anaesthetic machines
- Plans are automatically captured
- Visibility of real-time vitals through device integration for anaesthetic machines
- Anaesthetic record keeping integrated within medical record

## FN Emergency

- Triage, patient tracking and floor plan
- Paediatric specific ED clinical documentation
- Fewer systems
- Better visibility for other clinicians across emergency care

## Re Reporting

- Provides analysis and insight across aspects of the clinical record (e.g. NEAT)
- Surgical specified reports
- More consistent and coordinated across CHQ
- Can be tailored

## PT Integrated research

- Clinical research module
- Facilitates management of trial documentation and metrics
- Extensive database
- Integration with acute care through alerts/'on trial' tab across all protocols
