

How to complete the Paediatric Falls Risk Assessment in CareCompass

Who?

All inpatients, all ages, all wards

When?

On admission and continue daily

1. Open initial falls risk assessment on CareCompass and select DOCUMENT

- Safety management
 - Check the bed environment for appropriate height and demonstrate the use of bed rails
 - All children under two must be nursed in a cot with the cot rails up.
- Functional assessment
 - Complete assessment of level of assistance/supervision required for ADLs and transfers.
- Falls education
 - Engage the patient and family in discussion about:
 - carers role in falls prevention
 - environmental risks
 - paediatric falls prevention
 - clothing and non-slip footwear.
- Risk assessment and management plan
 - Identify the sleeping environment and select YES or NO for each of the identified risk factors
 - If YES is selected for any, document a falls management strategy (e.g. highlight specific risks, refer to physio, provide assistance).

2. Complete a daily falls risk assessment on CareCompass.

3. Repeat the risk assessment and management plan daily.
