## Clinical pharmacist worklist

### PowerChart

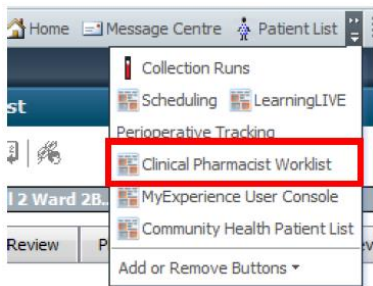

#### Quick reference guide

**Note:** To utilise Clinical Pharmacist Worklist to its full functionality, it is helpful to first create a Patient List in PowerChart. Refer to the relevant QRG.

1. First log in to **PowerChart**.
2. Next to the **Patient List** Icon on the tool bar, there is a double chevron option to expand the **Toolbar Options**. Click on this tool.

3. This will open an extended window. Select **Clinical Pharmacist Worklist**.

**Note:** Please note, in some instances, **Clinical Pharmacist Worklist** may already be in the toolbar and the drop down arrows do not need to be utilised. It can be available under View tab as well.

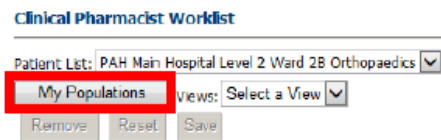

4. To create the **Clinical Pharmacist Worklist**, select the appropriate **Patient List** from the drop down menu. Click **Submit**.

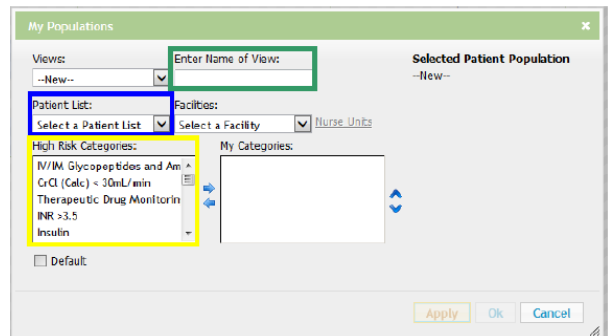

5. The **Clinical Pharmacist Worklist** will appear below. This will show all patients from the selected list on medications deemed high risk.

6. This list can be filtered based on different parameters. Select **My Populations**.

7. A pop-up window will appear. From this screen, it is possible to create a **New View** that filters the **Patient List** by **High Risk Categories**.

8. In order to create a new view for the **Clinical Pharmacist Worklist**, enter **Name of View**. Select the applicable **Patient List**. Select the appropriate **High Risk Category** and arrow to **My Categories**. Click **Apply**.

9. It is now possible to filter the patients in the **Clinical Pharmacist Worklist** by applying the **View**.

10. **Multiple views** can be created in the same way.
