Enteral feed bolus – nurse administration

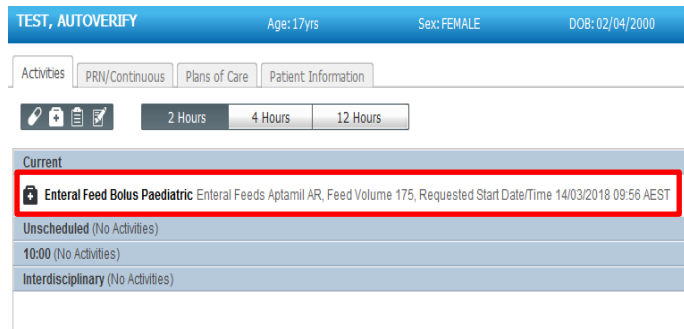

Care Delivery

Quick reference guide

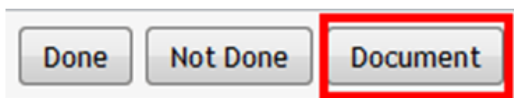

This QRG will help nurses commence and manage a Bolus/Intermittent Enteral Feed. Refer to the [Enteral Feed Continuous: Nurse Administration](#) QRG for continuous enteral feeds.

Note: The workflow process is to document administration of the [Enteral Feed](#) order(s) via the [CareCompass](#) tasks.

1. In [CareCompass](#), click the [Activities](#) tab.
2. Select the [Enteral Feed Bolus Paediatric](#).

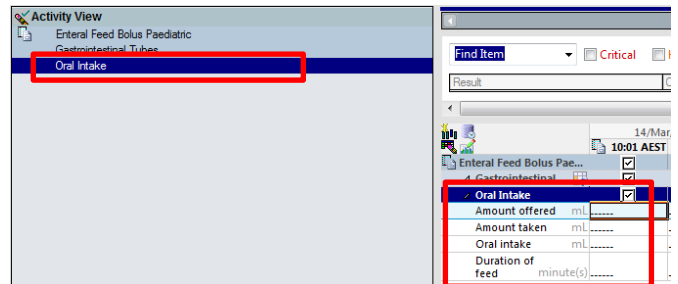

3. Select [Document](#).

Note: This will navigate through to [Activity View](#), where you can document against either the [Gastrointestinal tubes](#) iView band OR the Oral Intake sub-heading, if the feed is oral.

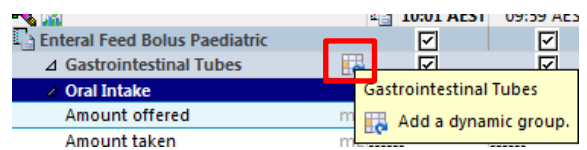

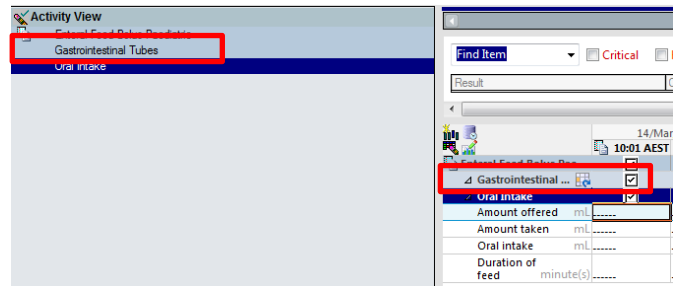

Note: You will need to create a dynamic group if there is not one already created.

4. If the feed to be administered orally, complete the Oral Intake documentation.

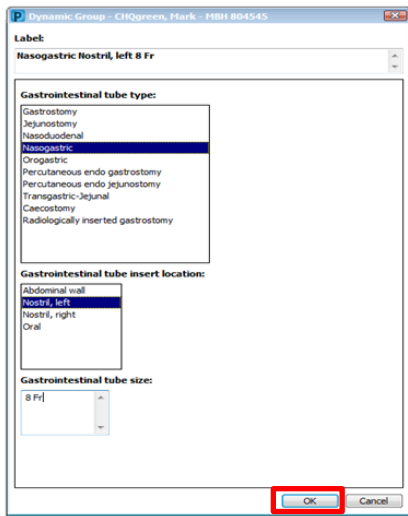

These fields will populate on the patient's fluid balance chart.

5. If the feed is to be administered via a gastrointestinal tube, add a [gastrointestinal dynamic group](#) e.g. [nasogastric](#) tube.

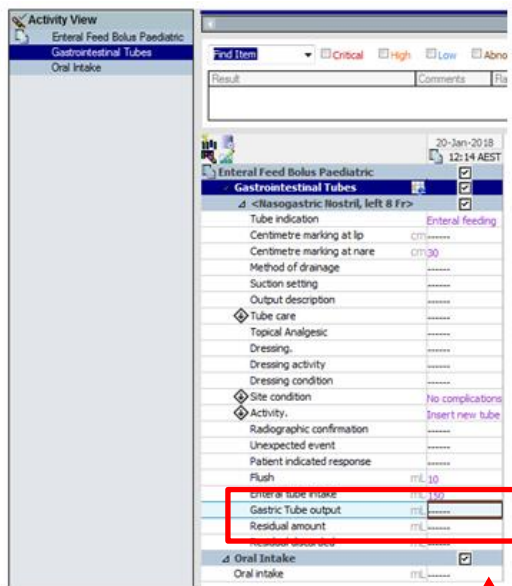

6. Document within the dynamic group by selecting the correct [tube type](#), [location](#) and [size](#).
7. Select [OK](#).

8. Enter all relevant details in corresponding field.

- 9. Click the **green tick** ✓ to verify the documentation.
- 10. Click **Refresh**.

Note: This feed volume information documented within this dynamic will also populate in the patient's Fluid Balance Chart.
