## Intervention charted medication

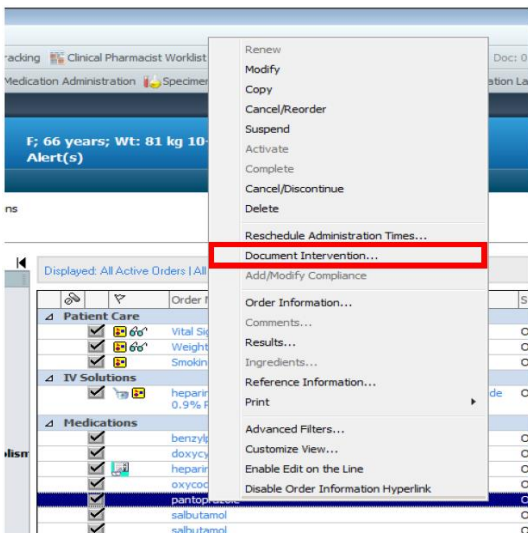

### PowerChart

#### Quick reference guide

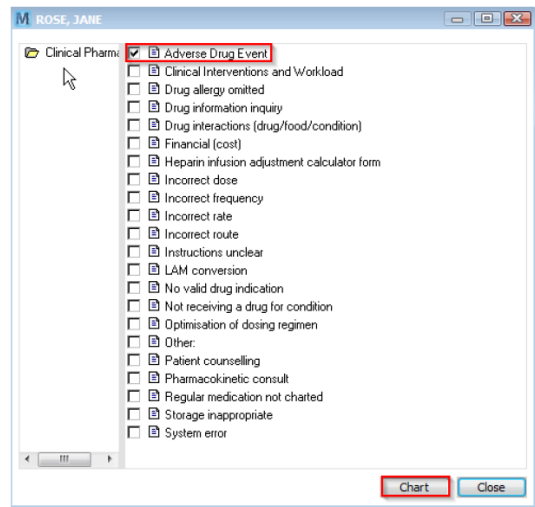

1. Log into **PowerChart**.
2. Navigate to the **Orders** screen from the **menu**.

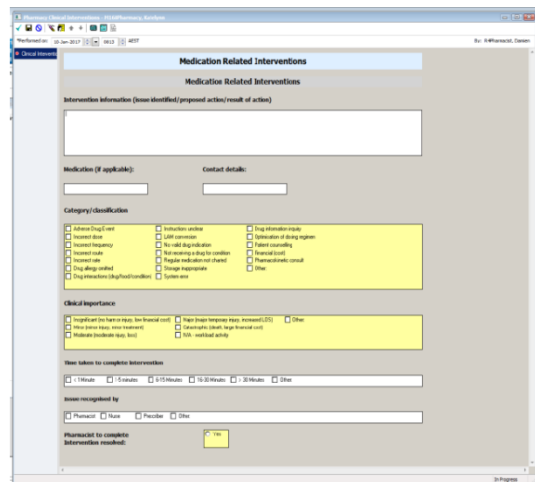

3. Right click on the relevant medication order and select **Document Intervention**.

4. A new window will appear where an intervention type needs to be selected. Select the appropriate option then select **Chart** located at the bottom right of the window.

5. The below window will display. Yellow boxes are compulsory fields. There is also the free text box at the top of the window where information relating the intervention can be documented. Information related to the intervention can also be added for statistics purposes.

6. Leave the **Time taken to complete intervention** button unchecked until the intervention is complete.

**Time taken to complete intervention**

< 1 Minute
  1-5 minutes
  6-15 Minutes
  16-30 Minutes
  > 30 Minutes
  Other:

7. Leave the **Pharmacist to Complete Intervention Resolved** button unchecked until the intervention is complete. Sign the form ✓.

Pharmacist to complete  
Intervention resolved:  Yes

8. The medication order will now have an **Intervention** icon . This intervention will now be displayed in the **Multi Patient Task List** in **PowerChart** and under the **Activities and Interventions** tab for the individual patient. A progress note entry will be documented automatically.
