

Login to SAAnaesthesia via purple ieMR AUTO LOGIN icon

SAAnaesthesia

Quick reference guide

Accessing **SAAnaesthesia** from the purple **ieMR AUTO LOGIN** icon on the SAA monitors will provide the user with a six hour inactivity time out period when utilising SAA. If you use the green **ieMR** icon, you will only be provided a 30 minute inactivity time out period.

Log into ieMR AUTO LOGIN

1. Locate the purple **ieMR Auto Login** icon on the computer desktop and double click to launch.

Wait for the generic user account credentials to auto populate (do not put your username in!) and auto logon to the **ieMR Applications** page:

The **ieMR Applications** page displays the available **Applications**, note there are two **SAAnaesthesia** icons.

2. Click to select the **SAAnaesthesia** icon for the appropriate day of the week prior to midnight – if it's 11.59pm on Tuesday pick Tuesday, if it's midnight on Tuesday pick Wednesday.

Note: The **ieMR Applications** page displays two **SAAnaesthesia** icons:

- **SAAnaesthesia M W F Su**
- **SAAnaesthesia T TH F Sat**

The day of the week will determine the icon to be selected to launch **SAAnaesthesia**

The Queensland Health Citrix Servers reboot nightly; using the appropriate day of the week icon mitigates the user potentially having to re-log into **SAAnaesthesia** mid-case.

The **Cerner Millennium Login** window displays:

Important: the above blue Cerner screen is the only area you should enter your Novell details into for SAA.

3. Enter your **Novell Username** and **Password**.
4. Click **OK**.

The **SAAnaesthesia Select Case** window displays.

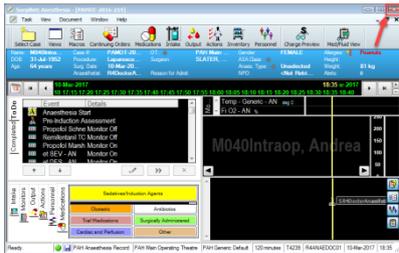

Note: If the incorrect day of the week **SAAnaesthesia** icon was selected, and the Citrix Server being used for the case is to be rebooted overnight, the user will be presented with a pop-up message:

“Server reboot in 15 mins – please log off and on again”

A second message will pop-up 10 minutes later and then a final message 1 min prior to the reboot.

If the user receives the Server reboot pop-up message (because you have not used the purple icon and the Cerner Millennium login window (blue one above) the user will need to close and re-open **SAAnaesthesia**, then re-launch the case.

1. Within the **SAAnaesthesia Record** click the red X to close the case and the **SAAnaesthesia Application**.

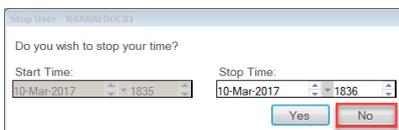

The **SurgiNet Anaesthesia** confirmation window displays.

2. Click the **Yes** button to stop charting in the **SurgiNet Anaesthesia** confirmation window.

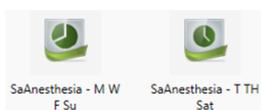

The **Stop User** time window appears:

3. Click the **No** button to avoid ending the personnel time.

4. Click to select the appropriate day of the week **SAAnaesthesia** icon from the **ieMR Applications** page.

If the **ieMR Applications** page has timed out, or has been closed by the user the Internet Explorer window needs to be closed and the purple **ieMR AUTO LOGIN** icon needs to be launched again.

Start from Step 1 of this QRG to launch **ieMR AUTO LOGIN** and re-log into the **SAAnaesthesia Application** to re-start the **Anaesthetic Record** and continue documentation.
