Pharmacy Care Organiser (PCO)

Quick Reference Guide

Column Functionality

Patient Column

This column displays patient demographics (their name, sex, DOB and their MRN (medical record number)). **Hover** your mouse over this grey section and a pop with additional information will appear.

The default setting on this list is **alphabetical order**, however this can be set to **reverse order** by clicking anywhere on the heading box.

Clicking on the patient's name will open their chart to the **Patient Summary** page.

Location Column

Shows the ward and bed of your patient

The default setting on this list is **numerical order**, however this can be set to **reverse order** by clicking anywhere on the heading box.

Visit Column

This column contains information about their **current encounter** including their date of admission and length of stay. Clicking on the heading box will change the order of your patient list from alphabetical by name to length of stay.

Patient Demographics Column

This column displays relevant clinical information including patient weight, height, creatinine, BSA, IBW, and CrCl (adult). These demographics are dynamic with those visible in the Demographics section in Pharmacy Medication Manager (PharmNet). This column cannot be sorted. **Note:** Weight will be rounded to nearest two (2) decimal places.

Fig 1 : PCO Patient Demographics column

Fig 2 : Pharmacy Med Manager Demographics section

Allergies Column

Shows the status of allergies recorded for each patient. The icons are the same as those listed elsewhere in PowerChart

Icon	Description
	No Allergies Recorded
	No Known Allergies (NKA) or No Known Medication Allergies (NKMA)
	Allergies Recorded
	Free-Text Allergies Recorded

Single clicking on the allergy icon will show more detailed information including the patient's reaction

Clicking on the allergies heading will sort the list order:
No allergies recorded, Allergies

Reconciliation Status Column

The Reconciliation column displays icons to indicate the medication history, admission reconciliation, and discharge reconciliation status for the patient's **current encounter**. As with other columns, clicking here will show more detailed information.

Clicking on the Expand All icon will show yet more information.

Icon key:

Icon	Medication History Status	Admission Reconciliation Status	Discharge Reconciliation Status
	Not Started or Incomplete	Not Started	Not Started
	Not applicable	Partial Pending	Partial Pending
	Not applicable	Partial	Partial
	Not applicable	Pending Complete	Pending Complete
	Complete	Complete	Complete

Clicking on the heading box will change the order of your patient list from alphabetical by name to reconciliation status.

Unverified Order Column

This column shows a count of unverified pharmacy orders for each patient. This column will be blank if there are no unverified orders; or will display an **alert icon** if any unverified orders have clinical checking alerts or Discern alert. Clicking on this cell will allow additional information to be seen, including order descriptions and length of time the orders have been unverified.

When an order has an alert it will display in red and bold. Orders awaiting product assignments are displayed with the product assignment icon .

Pharmacy Medication Manager (PharmNet) can also be launched from this column via the Hyperlink.

Clicking on the Unverified Orders heading will sort the patient list into descending order - showing patients with the highest number of unverified orders first.

Problems Column

Here your patient's documented problems across **all encounters** will display. Clicking on this cell will provide further information in a pop-up window.

Diagnosis Column

Here your patient's diagnosis/s for the **current encounter** will display. Clicking on this cell will show further information in the pop-up window.

Consults Orders Column

The consult column will show the number of Pharmacy Consults that have been placed for each patient.

Clicking on the cell will show detailed information about these orders.

Note: Follow up to Pharmacy does not appear in this column

Discharge Column

The Discharge Column displays a **Black Door** icon for any patients with a Discharge Order. Clicking on the Discharge cell will open the detail pane with further information including the **Discharge To** location and **Diagnosis**.

Comments Column

The comments column can be useful to pharmacy staff to add, edit and review Pharmacy Specific comments relevant to their patient. Simply click in the cell, type a new comment and click **Save**.

To edit your own comment, **click on the cell** containing the comment, the pop up will reappear and you can add another comment, or edit the existing one using the **pencil** icon. Alternatively, you can **delete** a comment using the **x**. You can delete another user's comment but cannot edit another user's comment.

Only the top 3 comments are visible on the PCO landing page.

Any additional comments are indicated by the number in the bottom right corner. Clicking on the cell will display all comments in a pop-up window.

The comments column may be utilised to provide any handover between pharmacists, risk categorisation of the patient (and days of full clinical review), and for documenting reasons for medication history unable to be obtained:

This column cannot be sorted.
