

PowerChart – activities and interventions – display all interventions (pharmacist)

Medication Management

Quick reference guide

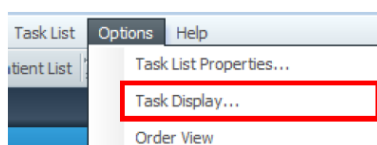

1. Log in to *PowerChart*.
2. Select the appropriate *Patient* profile.
3. Review the *Interventions* relating to the current patient under the *Activities and Interventions* tab in the menu bar.

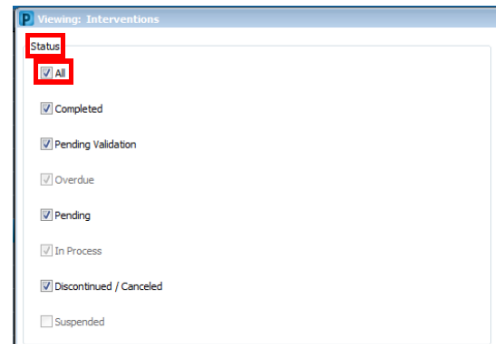

4. Ensure the *Interventions* tab is selected.

5. The default setting displays only *Pending Interventions*. These preferences can be updated to view all *Interventions* (including *Completed*, *Pending Validation* and *Discontinue/Cancelled*).
6. On the tool bar, select *Options*, then *Task Display*.

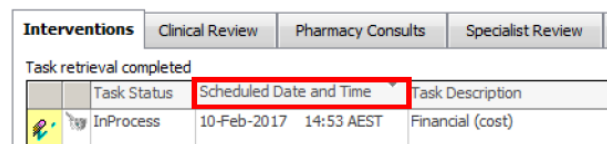

7. The *Interventions: Viewing* pop-up window will appear. From this screen, on the left-hand side the *Status* of the interventions can be updated to display *All*.

8. Click *OK* in the bottom, right-hand corner.

9. This has now updated to display *all interventions* associated with this patient. Please note that by updating the filters, all interventions ever documented for the patient will display (including those in separate encounters). To see the most recent, the interventions can be sorted into chronological order by clicking on the *Schedule Date and Time* header.

Note: *Interventions* can also be viewed through the *Multi-Patient Task List*. Please refer to the relevant Quick Reference Guide for further information.

It is important never to adjust the time frame from this screen.
