**Introduction**

In paediatrics, as in adult healthcare, increasing specialisation over past decades has led to fragmentation of health service delivery. This is particularly true for children with co-morbid and/or complex conditions, who may navigate multiple service providers and organisations to have their health needs met. Queensland’s geographically dispersed population compounds the challenge of integrating care for these children, with many families needing to travel large distances to access subspecialist paediatric care.

It is well understood however that the health and wellbeing of children and young people depends on more than timely, safe and effective medical care. Non-medical services such as education, housing and social support, as well as good family functioning are fundamentally important, underscoring the need for community-wide effort and collaboration if we are to improve child health outcomes in vulnerable communities.

Children’s Health Queensland Hospital and Health Service (CHQ) is committed to addressing these challenges and to implementing contemporary health service delivery models to optimise health outcomes for children and their families. The CHQ Strategic Plan 2016-2020 (reviewed 2018) articulates our vision of leading life-changing care for children and young people – for a healthier tomorrow. Two of the key strategic objectives to achieve this are child and family centred care, and working collaboratively with partners to improve service coordination and integration – both cornerstones of integrated care.

This Integrated Care Strategy (the Strategy) has been developed for use at an organisational and service level. It defines integrated care from a child and youth perspective and outlines the benefits expected if an integrated approach to healthcare delivery is adopted. It articulates the foundations of integrated care and describes system enablers which will allow CHQ to lead integrated care for children and young people in Queensland. The document further breaks down these system enablers into a highly practical ‘toolkit’ which will allow CHQ services to meet the strategic objectives of the organisation.

It is anticipated this document will be used to:

- build upon the existing strong foundations of integrated care initiatives within CHQ;
- inform quality improvement activity within CHQ, such that services become more collaborative and focussed on partnerships in the future;
- raise the profile of the role of the primary care sector, non-health government departments, and other agencies in the care of children and young people; and
- assist other jurisdictions to understand how integrated care can be applied in a paediatric context.
Integrated care: a definition

There is no single, agreed definition of integrated care, and understanding of the concept can vary. It is therefore imperative for organisations to define the term as they understand it.

CHQ defines Integrated Care as follows:

*Integrated care is the provision of care in the broadest sense - physical, psychological and social - which is oriented around the needs of children, young people and families, and designed and delivered in partnership with them.*

*In an integrated system, these needs are met through the coordinated and collaborative working of all providers, irrespective of sectorial, organisational or geographic boundaries.*

Benefits of integrated care

The benefits expected from CHQ adopting integrated care across the organisation align closely with the Quadruple Aim:

- improved quality of care for children and young people, by ensuring services are well coordinated around their needs
- improving the experience of care for children and families by reducing fragmentation and duplication in care
- improved cost-effectiveness of care for children and young people through better use of resources and reduced duplication
- improving the working life of care providers, through elimination of barriers to good communication, clarification of roles and support to work to the top of their scope of practice

Development of the Strategy

In the development of the Strategy, a number of national and international frameworks and policies were reviewed. The concepts were adapted to suit a child and youth population and further conceptual refinements were made to ensure the Strategy is a highly practical tool and that the concepts within are able to be readily implemented.

Frameworks and policies consulted in development of the Strategy include:

- *CHQ Strategic Plan 2016-2020* (reviewed 2018)

Further documents consulted in the development of the Strategy are referenced in Appendix 1.

**With families**

- Children, young people and families will have timely access to their health information and be supported to understand it, so they can actively participate in decisions about their care.

**With providers**

- With permission of the family, data and information will be shared with other providers of care, with a view to enhancing the safety and quality of care provided, and to minimise family inconvenience.

**With communities**

- We will promote the capture, analysis and sharing of de-identified data and information at a community level. This will inform and improve the delivery and evaluation of our services, and those of our partners.

**With families**

- Children, young people and families will participate meaningfully in the planning and governance of our services.

**With providers**

- We will work collaboratively with all providers of care for children and young people.

**With communities**

- Services, projects or bodies of work which are shared with our partners will be jointly planned and governed in a nonhierarchical manner.

**Our workforce will be our greatest resource in delivering integrated care.**

- We will build on the skills of our existing workforce to foster:
  - respect for, and recognition of, the complementary expertise of our partners;
  - open communication and negotiation between all care providers, both internal and external;
  - power sharing and team working.

**Co-commissioning and funding of service delivery will be considered.**

- New roles, or redesign of existing roles, may be required to support working across boundaries and a more integrated approach to care.

**We will foster a culture of collaboration.**

- We will acknowledge the contexts and pressures that other professionals and organisations face, and focus on what we are collectively trying to achieve:
  - better outcomes for children and young people;
  - better experience of care for children, young people and their families;
  - the most efficient use of resources; and
  - improving the work life of care providers.

*(Quadruple Aim)*
## ENABLERS OF INTEGRATED CARE

<table>
<thead>
<tr>
<th>Objectives</th>
<th>Digital enablement</th>
<th>Clinical pathways</th>
<th>Communication between providers</th>
<th>Capacity building</th>
<th>Engagement and partnerships</th>
<th>Research</th>
<th>Inter-professional education</th>
</tr>
</thead>
</table>
| Leverage technology to enable:  
  - Care closer to home;  
  - Family involvement in decision making and care planning; and  
  - Continuity and coordination of care across organisational boundaries.  
  Progress work towards a shared electronic health record (eHR) through which patients and families can:  
  - Access and contribute to their records in real time;  
  - Book appointments; and  
  - Find information about their condition and local services.  
  Explore opportunities to deliver services flexibly using technology, including e-diagnostic clinics and e-consultations. | Minimise variation in care across sectors and organisations.  
  Plan for and coordinate transitions across care settings.  
  Identify a ‘coordinator of care’ for all patients, to work closely with families to ensure needs are met and care plans align with the goals of the child and family.  
  Choice of coordinator will depend on complexity and medical need, as well as the degree of family activation, e.g.  
  - GP  
  - General paediatrician  
  - Nurse navigator  
  - Allied health professional  
  - Other | Communication in all its forms, digital and traditional, is recognised as being fundamental to delivering integrated care, particularly for those with chronic conditions and during transitions of care.  
  This includes shift-to-shift communication, interdepartmental or interdisciplinary communication, as well as communication with external providers within health or other agencies. | Providers of care for children and young people, within and external to our organisation, will be supported to work to the top of the scope of their role. These may include providers:  
  - in LCCH  
  - in community sites of CHQ  
  - in primary care  
  - in other HHSs  
  - others  
  With an ‘upskilled’ workforce, capacity will be released for specialised services within CHQ to focus on children and young people with the most complex needs. | Patient and family engagement  
  Engagement with children, young people and families as our partners, in the process of co-designing and delivering a more integrated system.  
  Staff engagement  
  CHQ staff from all parts of the organisation (frontline to executive) involved in improvement activities.  
  Stakeholder engagement  
  Collective decision making and accountability between communities, organisations and professions involved in care delivery. | Collect data across the following areas to monitor our progress towards integrated care and continually improve our efforts:  
  - Reach: Are we reaching the population/s we intend to serve?  
  - Implementation: Are we implementing strategy in the way we intended? (Fidelity and program adherence)  
  - Outcomes: Are we achieving the outcomes we set out to, for the populations we target? | We will create opportunities for learners from two or more professions to learn about, from and with each other, to:  
  - Build inter-professional respect;  
  - Enable effective collaboration; and  
  - Improve outcomes for children and young people.  
  We will develop inter-organisational learning opportunities. |

### Integrated Care Program – Logic Model

This program logic model demonstrates the linkages between CHQ activities and the outputs and anticipated outcomes of the Strategy. It represents a high level overview of the program of works, and is unlikely to remain static. As outputs are delivered and outcomes and benefits realised, ongoing evaluation and continual refinement will occur, as integrated care activity within CHQ matures.
